   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```

```
probable imbibition protein - wild cabbage C; Species; Brassica oleracea (wild cabbage) C; Date: 13-Jan.195 #sequence_revision 13-Jan C; Accession: S45033
K; Fujikura, Y; Karssen, C.K.
submitted to the EMBL Data Library, May 1994
A; Description: Cauliflower cDNA encoding a pia; Reference number: S45033
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁

submitted to the EMBL Data Library, August 1995
A; Description: The sequence of S. cerevisiae lambda 3641 and A; Reference number: S69555
A; Accession: S69702
A; Accession: S69702
A; Molecule type: DNA
A; Residues: 1-632 <DIE>
A; Cross = references: EMBL:U33007; NID:g927685; PIDN:AAB64856.1

Virology 169, 408-417, 1989

A;Title: Distinct lineages of influenza virus H4 hemagglutinin genes in different region A;Reference number: A34214; MUID:89204912

A;Recession: G34214

A;Rocession: G34214

A;R
extracellular solute-binding protein -
N;Alternate names: hypothetical protein
C;Species: Synechocystis sp.
A;Variety: PCC 6803
C;Date: 25-Apr-1997 #sequence_revision
C;Accession: S74819
                                                                                                                                                                                                                                                                                                                                                                           Š

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Claim 2; Page 16; 26pp; Japanese. Raffinose synthase gene - useful for transformed plant preparation of raffinose

The present sequence is a cucumber raffinose synthase fragment. Raffinose synthase forms raffinose from sucrose and galactinol, has

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                an optimum pH of 6 to 8 and working temperature of 35 to 40 degrees C, has a molecular weight of 75 to 95 kDa by gel filtration or 90 to 100 kDa by PAGE and SDS-PAGE under reductive conditions and is inhibited by iodoacetamide, N-ethylmaleimide and myoinositol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a raffinose synthase, having an activity of forming raffinose from sucrose and galactinol. The raffinose synthase gene can be used for expression in a plant for the production of raffinose. The raffinose synthase can give raffinose from sucrose and galactinol efficiently. The present sequence represents a raffinose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

                                                                             The present sequence is a raffinose synthase from clone sfl1.pk125.d4 isolated from a soybean immature flower cDNA library sfl1. Raffinose synthase is involved in the biosynthesis of raffinose and higher homologues in the raffinose saccharide family from sucrose. The present sequence is useful for reducing the raffinose saccharide content of soybean seeds which improves the nutritional quality of the soy protein products derived from them.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a raffinose synthase, having an activity of forming raffinose from sucrose and galactinol. The raffinose synthase gene can be used for expression in a plant for the production of raffinose. The raffinose synthase can give raffinose from sucrose and galactinol efficiently. The present sequence represents raffinose
                                                                                                                                                                                           Claim 2; Page 47-49; 58pp;
                                                                                                                                                                                                                     Nucleic acids and encoded proteins involved in the biosynthesis of raffinose, useful for producing soybean seeds with a reduced raffinose content and therefore improved nutritional quality -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents the broad bean raffinose synthetase of the invention. The raffinose synthetase is capable of producing raffinose by combining a D-galactosyl group through an alpha (1-6) bond with a hydroxyl group attached to the carbon atom at position 6 of a D-glucose residue in a sucrose molecule. The DNA can be used to modify metabolism of a host organism by introducing into the host organism or its cell so that the content of the raffinose family oligosaccharides in the host organism or cell is changed. Raffinose oligosaccharides are useful as food additives with beneficial effects on the gastrointestinal flora.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid molecule encoding plant raffinose synthetase capable of producing raffinose, used as food additives with beneficial effects on gastrointestinal flora
